SUMMARY

Software Engineer with five years of industrial engineering experience at VCT Ltd, bringing a perspective most developers simply don't have — I've built, serviced and troubleshot the very instruments my software now communicates with. Currently pursuing a BSc in Computer Science at Kingston University, combining hands-on engineering expertise with modern software development. Over the past 18 months I've designed TCP server applications, developed IoT dashboards and built automated test systems that operate without human intervention. I don't just write code to make things work — I write code to make things reliable. Passionate, resilient and open minded — a person that touches everything they do with excellence.

EXPERIENCE

Freelance - Software Engineer

London, Kingston Upon Thames

01/2026 - Current

- Developed a real-time IoT sensor dashboard integrating MQTT protocol, WebSockets and a live weather API, designed to receive live sensor readings from ESP32 hardware over WiFi and display dynamic conditions in a browser-based interface
- Designed and deployed a fully responsive personal portfolio website with custom animations and functional contact form, maintained using a professional Git workflow with continuous deployment via GitHub Pages

VCT LTD - Junior Software Engineer Intern

London, Surrey

03/2025 - Current

- Architected a production-grade multi-port TCP server with a delegate-driven data processing pipeline, handling simultaneous client connections across dynamically configured ports with full port validation and background thread lifecycle management
- Built a fully autonomous test client that generates structured test data across all registered delegates, stress tests server responses and reports pass/fail results without manual intervention
- Developed software solutions for instrument communication and data processing within a shared project architecture across multiple codebases
- Applied professional development practices including version control, code separation across shared projects and defensive programming throughout all work

VCT LTD - Manufacturing Technician

SKILLS

Languages & Frameworks

C#, JavaScript, HTML, CSS, Node.js, Python, Java

Networking & Protocols

TCP/IP, Multi-port Socket Programming, Stream Handling, MQTT Protocol, WebSockets

IoT & Hardware

ESP32, DHT22 Sensor, Mosquitto MQTT Broker, Sensor Data Integration, Instrument Communication

Frontend Development

Responsive Design, CSS Animations, Grid Layouts, Browser-based Dashboards, Single Page Applications

Backend Development

Node.js, Express, REST API Integration, Real-time Data Handling, Server Architecture

Software Design & Concepts

OOP, Delegate Patterns, Multithreading, Error Handling, Port Lifecycle Management, Systems Design, IoT Architecture, Shared Project Architecture

Testing & Quality

Automated Testing, Defensive Programming, Pass/Fail Validation, Stress Testing, Fault Diagnosis

Tools & Platforms

Visual Studio, VS Code, Git, GitHub, GitHub Pages, PuTTY

Practices

Version Control, Code Separation, Continuous Deployment, Agile Awareness, Technical Documentation

Engineering & Production

Precision Instrument Production, Quality Control, Technical Sign-off, Fault Diagnosis, Production Line Management, Sub-assembly Oversight

London , Surrey
01/2021 - Current

- Responsible for the end-to-end production and servicing of two dedicated product lines, ensuring consistent output quality and operational continuity
- Managed and met delivery deadlines across both product lines, maintaining production schedules under pressure
- Performed advanced troubleshooting and fault diagnosis on precision instruments, identifying and resolving technical issues efficiently
- Enforced rigorous quality control standards throughout the production process, ensuring all instruments met required specifications before release
- Produced and serviced high-precision instruments to exacting tolerances, demonstrating a consistent record of high-quality workmanship
- Held full sign-off authority for serviced instruments prior to customer return, accountable for final technical verification and approval
- Supervised and coordinated colleagues across various sub-assembly tasks, ensuring production targets were met collaboratively
- Demonstrated adaptability and a proactive approach to learning, taking on varied responsibilities across the business as required
- Undertaken a range of additional roles throughout tenure — further detail available upon request

LANGUAGES

English: C1
Advanced

Greek: C2
Proficient

German: A2
Elementary

HOBBIES AND INTERESTS

3D printing & CAD design | Gym & running | Freshwater fishkeeping | Competitive online gaming

EDUCATION

01/2024 - Current
Kingston University
Kingston upon Thames

Bachelor of Science: Computer Science
Currently studying and expecting to graduate in May 2028.
